

innovation Space from dream to demo

TU/e innovation Space is a community that develops and facilitates interdisciplinary hands-on challenge-based education, engineering design and entrepreneurship. We offer a place where students learn to deal with complex societal and industrial challenges, develop innovative projects with researchers, businesses and other stakeholders.

Building on a strong scientific collaboration that TU/e has with industry, TU/e innovation Space helps in developing an educational ecosystem to deliver the 'Engineers for the Future'. Hereby, TU/e innovation Space strives to contribute forming engineers that are better equipped to the demands of the job market, backed with experiences, skills, and attitude necessary for the 21st century.

We provide a platform that interconnects motivated students, staff and industry, creating a **vibrant community**, with ample room to meet formally and informally. We also **facilitate student learning** in curricular and extra-curricular activities. Students create science-based solutions to **real-world challenges**, in education projects, but also in extra-curricular student projects with commercial and non-commercial purpose. Students are supported to design and create **innovative prototypes** and experiment. TU/e innovation Space offers an environment that **stimulates and facilitates** students to take initiative and create their own learning environment.
